Optional Modules

Available Options

Expand your AUT Series with intelligent automation modules.

AUT Log- IN

Automatic Loading Module

1

The AUT Log-In module automates the entire product loading process by identifying, scanning and placing incoming medication packages directly into the storage system. Barcode verification ensures accurate inventory management, while the automated workflow significantly reduces manual handling and frees pharmacy staff for higher-value tasks.

Highlights

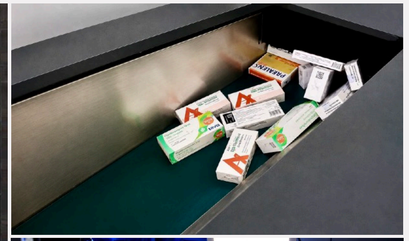

:: Automatic barcode verification

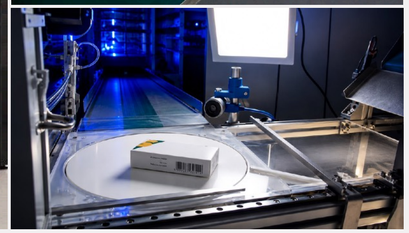

:: Continuous hands-free loading

:: Reduced operator workload

:: Improved inventory accuracy

Dual Robot

Simultaneous Robotic Picking

2

The Dual Robot configuration utilizes two robotic arms operating simultaneously within the same storage system. By intelligently distributing picking tasks between both robots, the system achieves significantly higher throughput while maintaining fast response times during peak operating hours.

Highlights

:: Parallel picking operations

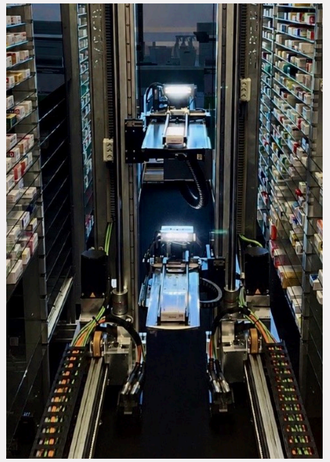

:: Increased dispensing capacity

:: Higher system availability

:: Maximum uptime

:: Intelligent task distribution

:: Improved reliability

EasyClean

Automatic Cleaning System

3

The EasyClean module automatically removes dust and debris from the storage area, helping maintain reliable operation while reducing routine maintenance requirements.

Highlights

:: Improved reliability

:: Cleaner operation

Modular Expansion

Scalable Storage Platform

4

The modular AUT platform can be expanded with additional storage modules and automation options as your pharmacy grows, protecting your investment and ensuring long-term flexibility.

Highlights

:: Expand when needed

:: Scalable platform
